

Installation Guide – Kumfi Tile PVC

- ◆ Start by thoroughly cleaning the area that you intend to cover, removing any dirt or debris.
- ◆ Lay the tiles out in the desired formation and gently tap them together using either your hands or a rubber mallet.
- ◆ Connecting bevels:
 - ◆ If you are attaching bevel edges to the tiles, simply click these into the outer side of the tiles, trimming the diagonal section where necessary to create a straight line as shown beside.
 - ◆ If the side of the tile already has connectors, cut off the connectors from the bevel edge as shown below, being careful not to damage the peg that is directly behind the connector.
- ◆ For cleaning and maintenance, please refer to the [data sheet](#).
