

# LogoScape

LogoScape delivers superior scraping action to effectively remove dirt and debris, making it a practical solution for both indoor and outdoor environments. It is available with two backing options: solid rubber for indoor use and a version with integrated drainage holes for outdoor applications, allowing water to self-drain and helping to maintain a safer, drier surface.

Built for durability, LogoScape features a compression-moulded rubber backing with reinforced borders on all four sides, ensuring long-lasting performance even in high-traffic areas.

The surface is made from 100% ECONYL® regenerated nylon derived from waste products, and the rubber backing contains 34% post-industrial recycled content, combining strength with sustainability.

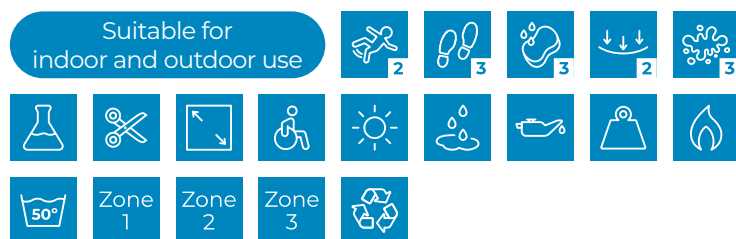

Logo mats are the perfect platform to showcase your company logo or message. With LogoScape, you have a customisable solution that works for both indoor and outdoor use. Choose from over 50 colours to create a design that reflects your brand.

To order, decide on your mat size and whether your mat is for indoor or outdoor use, email a high-resolution image of your design and brand guidelines to [sales@bluediamond.uk.com](mailto:sales@bluediamond.uk.com) in PDF, JPEG, or similar file format. Once your order is confirmed, you'll receive a full-colour proof for approval.

Please note: The maximum size for LogoScape with drainage holes is 115cm x 200cm. The size of the holes are 7mm in diameter.

## Features

- ◆ **Typical applications:** Perfect for indoor and outdoor use in schools, universities, public buildings, sports facilities, shopping malls, offices, hotels and bars, and restaurants.
- ◆ **Material:** 100% ECONYL® regenerated nylon surface derived from waste products, with 100% nitrile backing containing 34% post-industrial recycled content.
- ◆ **Cleaning:** Use a vacuum cleaner or an extraction cleaner to remove dirt. LogoScape is also machine washable.

|                       |   |
|-----------------------|---|
| Disability friendly:  | Yes, the low profile makes it suitable for wheelchair users   |
| Dry area:             | Yes   |
| Wet area:             | Yes   |
| Oily and greasy area: | Yes   |
| Heavy area:           | Yes   |
| Environment:          | Suitable for indoor and outdoor use   |
| Flame retardant:      | Yes   |
| Product testing:      | <ul style="list-style-type: none"> <li>◆ Static Electrical Propensity – Walking Test: 0.3 kV (ISO 6356)</li> <li>◆ Dynamic Coefficient of Friction: 0.50 DS (EN 13893)</li> <li>◆ Flammability: Classified Dfl-s1 (EN 13501-1)</li> </ul>   |
| Sustainability:       | <ul style="list-style-type: none"> <li>◆ Surface is made from 100% ECONYL® regenerated nylon derived from waste products</li> <li>◆ 100% nitrile backing contains 34% post-industrial recycled content</li> </ul>   |
| Cleaning:             | Use a vacuum cleaner or an extraction cleaner. LogoScape is also machine washable   |
| Machine washable:     | <p>Maximum 40-50°C - Mat can also be tumble dried.</p> <p>Due to its abrasive pile, LogoScape may attract lint if washed with other mat types. For best results, wash separately. If mixed washing is unavoidable, tumble-dry to reduce linting. After drying, lay mats flat to cool before rolling. Avoid storing damp mats folded or stacked to prevent colour transfer</p> |

## ECONYL®

The ECONYL® regeneration process gives a new life to waste materials that would otherwise be sent to landfill, transforming them into a new source of opportunities, in this case LogoScape.

Nylon waste – such as fishing nets, fabric scraps, carpet flooring, and industrial plastic – is recovered and converted into new yarn, which has the same qualitative characteristics as traditional nylon.

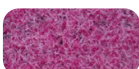

In the Life Cycle assessment of the nylon value chain, they discovered that the highest negative impact on our planet came from the raw material extraction phase.

Years and years of research finally led to the development of the ECONYL® Regeneration System: a highly innovative industrial process that allows replacing caprolactam (the main component to produce Nylon 6, derived from oil) with alternative raw materials coming from the recycling of various types of nylon waste.
